

## **MycoAlert™ Mycoplasma Detection Kit 20% discount**

Mycoplasma are common contaminants of cell cultures causing a serious impact on cell culture proliferation and cellular responses. Thus, if you desire consistency of your experimental results the detection and elimination of mycoplasma in your cell cultures is essential.

The MycoAlert™ Kit provides everything you need for the quick and convenient detection of viable mycoplasma in cell cultures, media, or supplements. The kit requires the use of a luminometer, and we highly recommend assessing the sensitivity of your luminometer and assay conditions using the MycoAlert assay control set.

MycoZap™ Mycoplasma Elimination Reagent removes detectable mycoplasma contamination in as little as four days with minimal toxic effects to the cells.

- MycoAlert™ Kit (25 Tests) **LT07-218**
- MycoAlert™ Kit (50 Tests) **LT07-418**
- MycoAlert assay control set (10 Tests) **LT07-518**
- MycoZap™ Elimination Reagent (1 Treatment) **LT07-818**
- MycoZap™ Elimination Reagent (5 Treatments) **LT07-918**
